

Day (4) , 02 June, 2021

- use headings then sub heading
 $h_1, h_2, h_3 \dots h_6$

① • `` `` \rightarrow to highlight
just put the content in b/w to show highlight

② • `<u>` `</u>` \rightarrow for underlining

③ • `<i>` `</i>` \rightarrow italic.

\hookrightarrow can use combination of all 3.

\rightarrow `` `<u>` `<i>` Content `</i>` `</u>` ``

④ `<a>` anchor

``

{ href :-
hypertext reference }

:- when you don't have an idea, to where the link should be redirected then use

→ listings:- used to display the long texts in to short and summarized formats & display in points
there are two types of listing.

- 1) order
- 2) unordered.

⑤ hr Horizontal line.
→ title and align are mostly used in ↑ beaches ↓

→ title attribute ⇒ title = " "
When you will hover, it will show value (beaches).

→ align = " " → for alignment
↓
Left
Right
Top
...

→ Inbound and outbound link → learn something
↓

→ Meta tag ~~on~~ usage → SEO & other digital marketing.
